## 2.3 Dust Monitoring Results Summary

All dust monitoring results to the end of June 2018 indicate that the Dust Deposition (Insoluble Solids), TSP and PM10 levels recorded were below the project criterion. The average TSP and PM10 results were the lowest for any month since records commenced in April 2016.

## 3. BLAST MONITORING RESULTS

The conditions stipulated for blasting is referred to in Condition L5 and M7 of EPL 20611 and Schedule 3, Condition 8 of PA 09\_0175. Blast monitoring is undertaken at every blast. **Table 8** summarises the blast monitoring criteria.

**Table 8** Blasting criteria

Location	Airblast overpressure (dB(Lin Peak))	Ground vibration (mm/s)	Allowable exceedance
Any residence on privately-owned land, or any public infrastructure	120	10	0%
	115	5	5% of the total number of blasts over a period of 12 months

Summary of blasting results are shown in **Table 9**.

**Table 9** Blast Monitoring Results

Date and time	Overpressure and vibration	Location B (Nearest Residence)
13/06/2018	Overpressure dB(L)	113.5
12:34 PM	Vibration (mm/s)	0.91

As shown in Table 9, one blast was undertaken during June 2018. Monitoring results indicate this blast was below the EPL limits for overpressure and vibration at the nearest residents (Location B).

## 4. NOISE MONITORING

Schedule 3 Condition 3 of the Project Approval and Condition L4.1 of the EPL requires Karuah East Quarry to ensure noise generated by Quarry operations does not exceed criteria outlined in **Table 10**.

**Table 10** Operational Noise Criteria (dB(A) LA<sub>eq(15min)</sub>)

Location	Criteria ( <sup>1</sup> day)
Residence on Lot 11 DP 10244564	43
A	40
B	37
G	38
All other residence	35

**Note <sup>1</sup>:** A day is defined as the period from 7am to 6pm Monday to Saturday and 8am to 6pm Sunday and Public Holidays.

The noise criteria shown in **Table 10** is not indicative of the construction noise criteria for the Karuah East Quarry project. Construction noise criteria has been developed based on the *NSW EPA Interim Construction Noise Guideline* for each location and is set out in Table 9 of the approved [Noise Management Plan \(SLR, 2015\)](#).

In accordance with Schedule 3 Condition 5 and Condition 7 of the Project Approval and the [Noise Management Plan \(SLR, 2015\)](#) a noise monitoring program has been implemented. Summary of this monitoring program is outlined in **Table 11**.

**Table 11 Noise Monitoring Program**

Construction Noise Monitoring			
Monitoring Method	<sup>1</sup> Location	Frequency	<sup>2</sup> Criteria (dB(A) LA <sub>eq(15min)</sub> )
Attended noise monitoring	F	At the commencement of new activities and a min of once per quarter.	54

Unattended noise monitoring	G	Quarterly	As per Table 10, 12 and 13 <a href="#">Noise MP (SLR, 2015)</a>

- Note:**
1. Monitoring locations are shown in Appendix 1.
  2. Criteria is for daytime limits. Daytime is defined as the period from 7am to 6pm Monday to Saturday and 8am to 6pm Sunday and Public Holidays.

**Noise monitoring was not required in June 2018. The most recent monitoring was undertaken in May 2018.**

## 5. SURFACE WATER MONITORING

Condition M2 of the EPL outlines the requirement to monitor surface water discharges from Karuah East Quarry via the three licensed discharge points (LDP001, LDP002, LDP003). The *Statement of Commitments* (Appendix 6, PA 09\_0175) requires additional surface water monitoring to be undertaken for the first twelve months of operations. This additional water monitoring requires monthly sampling to be undertaken at the three licensed discharge points and at four locations on Yalimbah and Bulga Creeks when in flow.

All discharged water from the three licensed discharge points are required to meet the water quality concentration limits as stipulated in Condition L2.4 of the EPL. This criterion is shown in **Table 12** below.

**Table 12 Surface Water Discharge Monitoring Criteria**

Sampling Points	Pollutant	Unit	EPL Limit
LDP001 (Dam 1)	pH	pH units	6.5 – 8.5
LDP002 (Dam 2)	TSS	mg/L	40
LDP003 (Dam 3)	Oil & Grease	mg/L	5 and/or none visible

## 5.1 Discharge Monitoring Results

An uncontrolled discharge event occurred on the 5 and 6 June 2018 from Dam 1 (LDP1) due to heavy rain. A controlled discharge was carried out at Dam 2 on 26 and 27 June 2018.

Discharge monitoring results shown in **Table 13** and **Table 14** below.

### 5.3 Surface Water Results Summary

Dams 1 and 2 discharged during June 2018. Dam 1 had a single uncontrolled discharge event during the month, whilst Dam 2 had a single controlled discharge. The discharge monitoring showed that the pH was slightly below the EPL criterion at Dam 1 during the time of discharge whilst the total suspended solids was slightly above the EPL criterion on 6 June. However, the monitoring results from SW2 indicate that the pH and total suspended solids did not have any adverse effect to the water quality.

The monthly water monitoring that was conducted on the 19 June 2018 showed that all the sediment dams had elevated results for total suspended solids. This was due to the high rainfall that occurred during the month. Flocculent was added to the sediment dams to improve clarity. The total suspended solids had dropped below the EPL criterion for discharge at Dam 2 by the 26 June 2018 and therefore the excess water was released as a controlled discharge event on 26 and 27 June.

## 6. GROUNDWATER MONITORING

Groundwater monitoring is undertaken to meet the *EA Statement of Commitments* (Appendix 6, PA 09\_0175) and Section 8.2 [Water Management Plan \(SLR, 2015\)](#). Groundwater levels are monitored quarterly and water quality biannually at four groundwater monitoring bores (piezometers). Details of this monitoring program is shown in **Table 17**. Refer to Appendix 1 for piezometer locations.

**Table 17 Groundwater Monitoring Program**

Piezometer	Location	Water Level monitoring frequency	Water Quality monitoring frequency
<sup>1</sup> BH205	Lot 13/DP1024564	Quarterly	Biannually
<sup>2</sup> BH207	Lot 13/DP1024564	Quarterly	Biannually
BH208	Lot 21/DP1024341	Quarterly	Biannually
BH303	Lot 21/DP1024341	Quarterly	Biannually

**Note:** 1. Piezometer BH205 was relocated approximately 30m to the west on 13 March 2017  
2. Piezometer BH207 was relocated approximately 60m to the north on 26 September 2016.
