Monitoring locations are identified in in Appendix 1.

2 AIR QUALITY MONITORING

Dust emissions generated by the Quarry operation must not cause additional exceedances of ambient air quality criterion outlined in *Schedule 3, Condition 14* of the Consent (see Table 3, Table 4 and Table 5). Deposited dust and TSP/PM₁₀ monitoring is undertaken at the locations listed in Table 6.

Note ¹: DDG4 was not able to be analysed for period 03/06/2021 to 05/07/2021 due to sample jar breaking during collection and transportation to the laboratory.

Monitoring results indicate that for the period 3^{rd} of February 2022 to 7^{th} of March 2022 the insoluble solid levels recorded at DDG 1 to DDG 4 monitoring locations were below the project criterion of 4 g/m²/month.

2.2 HIGH VOLUME AIR SAMPLING

The TSP and PM_{10} results for February 2022, the report average and a rolling annual average are shown in are shown in Table 8.

Figure 1 illustrates the year-to-date results for HVAS monitoring.

3 BLAST MONITORING

Blasting must only be carried out between the hours of 9:00 AM and 4:00 PM Monday to Friday. No blasting is permitted on Saturday, Sundays or Public Holidays. Blasting outside of the hours specified by the EPL/Consent, can only take place with the written approval of relevant regulatory authorities.

KEQ conduct monitoring at the nearest residential location (EPL 11569 EPA identification no. 11) to ensure that airblast overpressure level and ground vibration peak particle velocity do not exceed the EPL and Consent criteria (see **Error! Reference source not found.**).

Parameter	Units of Measure	Frequency	Sampling Method
Airblast Overpressure	Decibels (Linear Peak)	All blasts	Australian Standard AS 2187.2-2006
Ground Vibration Peak Particle Velocity	Millimetres/second	All blasts	Australian Standard AS 2187.2-2006

Table 9 EPL 11569 Condition M7.1 Blasting

There were no blasts conducted in February 2022.

NOISE MONITORING 4

Noise generated by the Quarry operation must not exceed the criteria specified in Schedule 3, Condition 14 of the Consent (see Error! Reference source not found.) at the locations identified in 10.

4.1 ATTENDED MONITORING

Attended noise monitoring is required to be undertaken at the two nearest residences (NM1 and NM2) biannually.

The most recent attended noise monitoring was undertaken during November, see monitoring results in Error! Reference source not found..

Table 12 Attended noise monitoring results

Notes:

 Modifying factor correction for LFN in accordance with Fact sheet C of the NPfi.
 Meteorological data were taken as an average over 15 minutes from the Karuah Quarry on-site weather station (Refer to Section 5.1). 3. IA = inaudible.

4. N/A = not applicable.

The results of the attended monitoring (Table 12) show ambient noise levels include noise sources such as traffic from the nearby Pacific Highway and wildlife such as birds. The Quarry operation was inaudible at location NM1 and NM2.

4.2 UNATTENDED NOISE MONITORING

Unattended noise monitoring is required to be undertaken at the two nearest residences (NM1 and NM2) biannually.

The most recent unattended noise monitoring was undertaken during November, see monitoring results for NM1 and NM2 in table 13.

Table 13 NM1 - Unattended noise monitoring results

Location	Period	Measured noise levels, dB					
		L _{A90}	L _{Aeq,period}				
NM1	Day	44	50

	Night	39	50				
NM2	Day	55	63				
19 November – 1 December 2021	Evening	50	62				
	Night	41	60				

The attended noise monitoring conducted during November 2021 identified that the Quarry was not audible at location NM1 or NM2.

5 SURFACE WATER MONITORING

Condition *L2* of the EPL outlines the requirement to monitor surface water discharges from the Quarry via the licensed discharge point (LDP001), see Table 14.

Table 14 EPL 11569 - Pollutant concentration limits

Pollutant	Units of Measure	Concentration Limit			
Oil and Grease	Visible	5 &/or non-visible			
рН	pH units	6.5 – 8.5			
Total suspended solids	Milligrams per litre	50			

There were no controlled discharges from LDP001 during the month of February 2022.

6 WEATHER MONITORING

Karuah Quarry has a permanent meteorological station to monitor various weather parameters. Figure 2 shows the recorded results for the local weather during February 2022. Weather data is significant from an environmental perspective, especially when regarding the total rainfall in the area as this effects multiple variables particularly erosion and sediment control as well as water quality management.

A wind rose is a graphic tool used to depict the average direction and speed of the wind over a recorded period. Figure 3 shows the wind rose generated from data gathered during February 2022.
