1 Introduction

This report has been completed to meet the requirements of Section 66(6) of the *Protection of the Environment Operations Act 1997* and the NSW Environmental Protection Authority's (EPA) *Requirements for Publishing Pollution Monitoring Data* (EPA, 2013). This report summarises the required monitoring data under *Environmental Protection Licence 11569* (the EPL) (see Table 1) and *Development Consent 265-10-2004* (the Consent) (see Table 2) for the Karuah Hard Rock Quarry (the Quarry).

A summary of the environmental monitoring data for November 2020 is covered in this report.

Tables throughout this report provide key monitoring information from the EPL and the Consent, such as:

- location of monitoring;
- pollutant;
- unit of measurement; and
- monitoring frequency required.

Monitoring locations are identified in in Appendix 1.

2 AIR QUALITY MONITORING

Dust emissions generated by the Quarry operation must not cause additional exceedances of ambient air quality criterion outlined in *Schedule 3, Condition 14* of the Consent (see Table 3, Table 4 and Table 5). Deposited dust and TSP/PM $_{10}$ monitoring is undertaken at the locations listed in Table 6

| Deposited dust | Annual | 2 g/m ² /month | 4 g/m ² /month |

Note 1: Deposited dust is assessed as insoluble solids as defined by AS 3580.10.1-2003.

 $^{^{2}}$ The rolling average is from 4/12/2019 to 28/11/2020, this is not a measure of compliance.

All HVAS monitoring results, to the end of November 2020 were compliant with the long term and short term impact assessment criteria outlined in *Schedule 3 Condition 14* of the Consent (see Table 3, Table 4 and Table 5).

3 BLAST MONITORING

The following conditions from the EPL refer to blast management:

- M6.1 The licensee must monitor all blasts carried out in or on the premises at or near the nearest residence or noise sensitive location (such as a school or hospital) that is likely to be most affected by the blast and that is not owned by the licensee or subject of a private agreement between the owner of the residence or noise sensitive location and the licensee relating to alternative blasting limits.
- L4.1 Blasting in or on the premises must only be carried out between 0900 hours and 1500 hours, Monday to Friday. Blasting in or on the premises must not take place on weekends or Public Holidays without the prior approval of the EPA.
- L4.2 The overpressure level from blasting operations carried out in or on the premises must not:
- exceed 115 dB(L) for more than 5% of the total number of blasts carried out on the premises within the 12 months annual reporting period; and
- b) exceed 120 dB(L) at any time at any residence or noise sensitive location (such as a school or hospital) that is not owned by the licensee or subject of a private agreement between the owner of the residence or noise sensitive location and the licensee as to an alternative overpressure level.
- L4.3 The ground vibration peak particle velocity from blasting operations carried out in or on the premises must not:
- exceed 5mm/second for more than 5% of the total number of blasts carried out on the premises within the 12 months annual reporting period; and
- exceed 10mm/second at any time at any residence or noise sensitive location (such as a school or hospital) that is not owned by the licensee or subject of a private agreement between the owner of the residence or noise sensitive location and the licensee as to an alternative ground vibration level.

There were no blasts in the monitoring period of November 2020.

4 Noise Monitoring

Noise generated by the Quarry operation must not exceed the criteria specified in *Schedule 3, Condition 14* of the Consent (see Table 9) at the locations identified in Table 10.

Table 9 Noise impact assessment criteria

| Time Period | Noise Limit (dBA) LAeq(15minute) |

| 7:00am to 1:00pm Saturday | |
| Evening | 47 |
| 6:00pm to 10:00pm Monday to Friday | 47 |
| At All Other Times | 46 |

4.1 ATTENDED MONITORING

Attended noise monitoring is required to be undertaken at the two nearest residences (NM1 and NM2) biannually. Attended noise monitoring was conducted in November 2020. See the November monitoring results in Table 11.

Table 11 Attended noise monitoring results

| Location | Date/Start Time/ Weather | Primary Noise Descriptor (dBA re 20 μPa) | | | | Description of Noise Emissions and Typical | |
|--------------------------|------------------------------------|---|-----|------|------|---|--|
| | | LA _{max} | LA1 | LA10 | LA90 | LA _{eq} | Maximum Noise Levels (dBA) |

The results of the attended monitoring (Table 11) show ambient noise levels include noise sources such as traffic from the nearby Pacific Highway, wildlife such as insects and birds, and farm activities. The Quarry operation was inaudible at location NM1 and NM2.

4.2 UNATTENDED NOISE MONITORING

Unattended noise monitoring is required to be undertaken at the two nearest residences (NM1 and NM2) biannually.

Unattended noise monitoring was conducted in November 2020. See the most recent monitoring results for NM1 in Table 12 and NM2 in Table 13.

Table 12 NM1 - Unattended noise monitoring results

| INP Period | L _{A1} | L _{A10} | L _{A90} | L _{AEQ} |

| Day | 64 | 60 | 51 | 57 |
| Evening | 66 | 62 | 49 | 59 |
| All other times | 66 | 63 | 47 | 58 |

| Day | 70 | 67 | 54 | 63 |
| Evening | 71 | 66 | 52 | 63 |

The attended noise monitoring conducted during November 2020 identified that the Quarry was not audible at location NM1 and NM2. Determined compliant for the monitoring completed in November 2020.

5 SURFACE WATER MONITORING

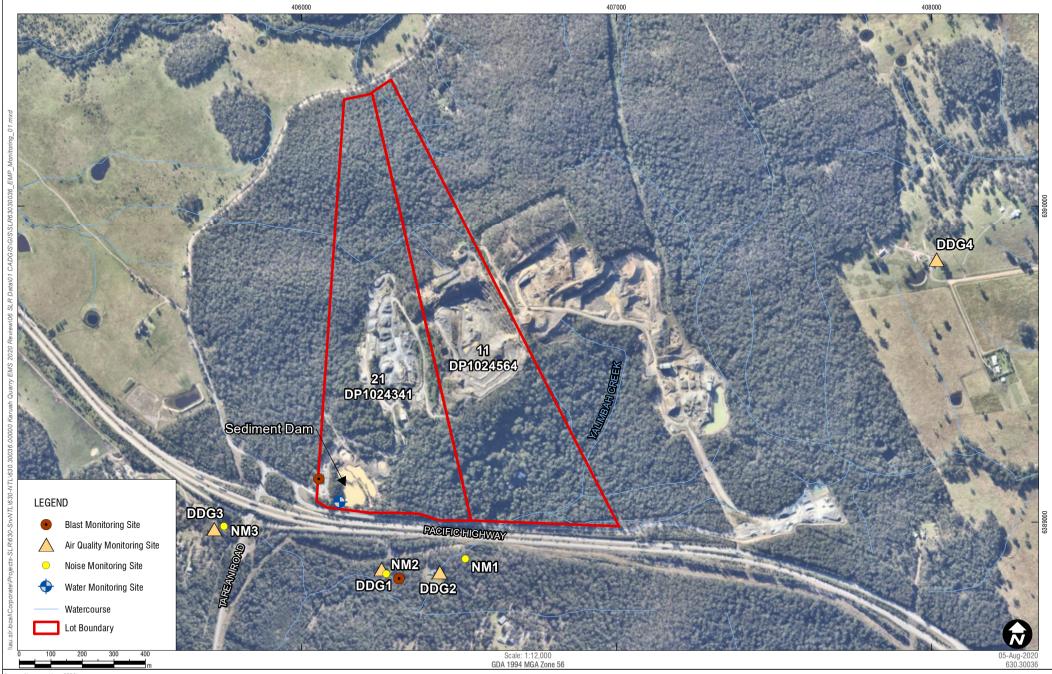

Condition *L2* of the EPL outlines the requirement to monitor surface water discharges from the Quarry via the licensed discharge point (LDP001), see Table 14.
